The Planket F.A.Q.

Q. Is it OK to leave the Planket on for the entire Winter?
A. No, the Planket is designed to be used only for relatively short periods during overnight frost and light freezes.

Q. Is the Planket waterproof?
A. No, but it is water resistant unlike the sheets and blankets you are currently using that can soak up water and potentially damage tender plants. The Planket will become wet but never heavy.

Q. Do I need to wash the Planket after use.
A. Under normal usage you should not have to wash the Planket. Since it is cinched to the pot or plant it should not come loose and contact dirt or mud. If it should become dirty you may wash it but the material is naturally repellant to dirt.

Q. What temperature will the Planket protect to?
A. Unfortunately there are too many variables to give an exact temperature. It will depend not only on air temperature but also wind conditions, humidity and the inherent resistance to cold of the particular plant. Any prolonged temperatures in the mid to low twenties should necessitate moving the plant to a warmer location.

Q. How do I know what size Planket to use?
A. Measure from the pot or base of the plant up and over the plant back down to the pot or base on the opposite side. In general, the 6 ft. unit will cover a plant 2ft. x 2ft., the 8 ft. unit will cover 3ft. x 3ft., and the 10ft. unit will cover 4ft. x 4ft.

Q. How do I use the Planket for my hanging baskets?
A. Both the six foot and eight foot Plankets have a grommet in the middle with a plug that can be removed. Simply remove the plug and insert the hanger on the basket through the hole. Cinch up the bottom using the draw string. If the hanger won't fit through the hole you can cut a larger hole around the grommet.
